

## **1. Which database engine you choose and why?**

Concerning the choice of database, I was dealing with JSON format data for which document oriented database was good choice. Thus, I chose MongoDB due to support of many drivers and can deal with tree structures.

## **2. Which web framework you choose and why?**

I chose flask over Django or any other framework because the API service that I needed to implement would be easy and it was fulfilling the requirement of this project.
